SteriPEN – The Safe Way to Drink Agua

Featuring: SteriPEN Traveler

URL: <http://tinyurl.com/d4chbt>

### SteriPen- the safe way to drink Agua

Gear for the Adventurer/Camping, Adventurer/Extreme Gear, Adventurer/Travel

If you enjoy vomiting and explosive diarrhea, by all means don't use the SteriPen Traveler on your next adventure.

The Traveler is half the size of the SteriPEN Classic with the same great attributes. The convenient pocket sized gadget purifies water by way of an ultraviolet light. The UV kills 99.9 percent of protozoa while simultaneously turning you into a super hero upon consumption of the radioactive H2O\*.

The SteriPen has been proven to protect against common microbes such as Cryptosporidium and Giardia as well as pathogens that cause Hepatitis and Legionnaires disease. This is the perfect travel companion to "at risk" water countries or long camping trips.

Also look for the SteriPen Adventurer with the Solar Charging Case. This item is not recommended for individuals seeking to contract Cholera, Botulism, or sound travel habits.
